

UI Overhaul — Phase 1

Design System and Core Shell · evidence that tasks U-01 to U-04 are satisfied by the shipped archive.

Archive	learfinal.zip (learfinal.zip.part0 + .part1)
Commit	f03809f
Branch	arena/01a0ec0b-lear-final
Frontend tests	121 passing
Generated	2026-09-29 15:16 UTC

Every figure below is measured from the source tree by `scripts/gen_compliance_pdf.py` when this PDF is built. Nothing here is typed in by hand, so a deleted file or a removed token changes the document rather than leaving a stale tick behind.

U-01 — Design system audit and token overhaul

Requirement	Where it lives in the archive	Measured
Review <code>index.css</code>	<code>desktop/src/index.css</code>	178 lines; layered, imports tokens + 3 fx sheets
Spacing scale	<code>desktop/src/styles/tokens.css</code>	23 tokens
Typography scale (Inter / Outfit, Google Fonts)	<code>desktop/index.html</code> , <code>tokens.css</code>	16 size steps, 4 leading, 3 families; Inter + Outfit + JetBrains Mono loaded from <code>fonts.googleapis.com</code>
Colour palette + neutral scale + semantic status	<code>desktop/src/styles/tokens.css</code>	58 colour tokens incl. success / warning / danger / info
Elevation / shadow system	<code>desktop/src/styles/tokens.css</code>	16 shadow tokens
Border-radius scale	<code>desktop/src/styles/tokens.css</code>	10 radius tokens
Motion / easing tokens	<code>desktop/src/styles/tokens.css</code>	9 easing + 7 duration tokens

SATISFIED `tokens.css` is 293 lines defining 219 custom properties. The entry page was migrated onto the same tokens, and the last cyan/violet values were removed.

Deviation from the brief: The brief names neon pink `#FF3A89` as the palette anchor. The console is built on gold `#E8B44A` instead, because you asked for gold and black. Pink survives as a single whisper token (1 occurrence in the tree) rather than being deleted, so it can be reinstated without re-plumbing anything.

U-02 — Sidebar and navigation redesign

Requirement	Where it lives in the archive	Measured
Smoother transitions	<code>desktop/src/components/Sidebar.tsx</code>	framer-motion width animation; transform/opacity only
Better active state indication	<code>Sidebar.tsx</code>	gold rail marker + aria-current on the active item
Collapsible mode	<code>Sidebar.tsx</code>	264px ↔ 76px; 24 references; choice persisted to localStorage
Keyboard navigation	<code>Sidebar.tsx</code>	Ctrl/Cmd+B collapses; Alt+1...7 jump to each section; hints shown in the UI

SATISFIED Sidebar.tsx is 19.4 KB / 454 lines, and every one of the four requested capabilities is present and reachable without a mouse.

U-03 — Dashboard redesign

Requirement	Where it lives in the archive	Measured
Dashboard.tsx no longer bloated	desktop/src/components/Dashboard.tsx	17.0 KB (451 lines), down from the 50 KB described in the brief
HealthBar	desktop/src/components/dashboard/HealthBar.tsx	present
KPIStrip	desktop/src/components/dashboard/KPIStrip.tsx	present
ActivityFeed	desktop/src/components/dashboard/ActivityFeed.tsx	present
QuickActions	desktop/src/components/dashboard/QuickActions.tsx	present
Micro-animations on data update	desktop/src/components/dashboard/CountUp.tsx	KPI values tween between old and new instead of snapping

SATISFIED Extracted into 7 modules: ActivityFeed.tsx, CountUp.tsx, HealthBar.tsx, IncidentCenter.tsx, KPIStrip.tsx, QuickActions.tsx, ServiceBoard.tsx. Three beyond the brief (CountUp, IncidentCenter, ServiceBoard) fell out of the same decomposition.

U-04 — Component library foundation

Requirement	Where it lives in the archive	Measured
Button	desktop/src/components/ui/Button.tsx	present, exported, typed
Card	desktop/src/components/ui/Card.tsx	present, exported, typed
Badge	desktop/src/components/ui/Badge.tsx	present, exported, typed
Input	desktop/src/components/ui/Input.tsx	present, exported, typed
Modal	desktop/src/components/ui/Modal.tsx	present, exported, typed
Dropdown	desktop/src/components/ui/Dropdown.tsx	present, exported, typed
Tooltip	desktop/src/components/ui/Tooltip.tsx	present, exported, typed
Skeleton	desktop/src/components/ui/Skeleton.tsx	present, exported, typed
EmptyState	desktop/src/components/ui/EmptyState.tsx	present, exported, typed

SATISFIED All 9 primitives ship with exported prop types from a single barrel (desktop/src/components/ui/index.ts), which is what makes 'every future component builds on these' enforceable rather than aspirational.

How to verify this yourself

Nothing above requires trusting the document. From the extracted archive:

cd lear-premium-ui/desktop && npm install	install the UI toolchain
npm tsc --noEmit	type-check: expect no output
npm vitest run	expect 121 tests passing

<code>npm run build</code>	production build
<code>python scripts/gen_compliance_pdf.py</code>	regenerate this PDF from source

What is NOT claimed

U-01's neon-pink anchor was replaced with gold, as requested in conversation — the brief and the build disagree here and the build followed you, not the document. The 1,557-entry playbook catalogue is 630 executable and 927 guided, and the UI labels each row accordingly. The 138,240-animation motion space is a composition space, not 138,240 hand-authored animations; the hand-authored figure is 2,183 and is reported separately. These distinctions are enforced by tests, not by prose.
